UDDER MATE TEAT SANITISER

DESCRIPTION

UDDER MATE is a teat sanitiser containing Chlorhexidine Gluconate, which is used to assist in the control of mastitis in dairy cattle and as an aid in the control of teat cracking and chapping.

APPLICATION

UDDER MATE may be applied to a cow's teats in the conventional dipping method or by spraying the udder area using a suitable pressure sprayer.

Every cow should be treated with UDDER MATE after every milking to provide effective protection against mastitis.

BENEFITS

- Proven to be effective against mastitis causing bacteria such as Staph Aureus, Strep. Agalactiae and E. Coli.
- Contains emollients which will aid in maintaining smooth and soft teat skin.
- Can be used as a teat dip or teat spray.
- Highly concentrated for economy in use.

DIRECTIONS FOR USE

As a teat dip

Mix one part of UDDER MATE with nine parts of cool water (less than 50°C) and using a small non-metal cup dip each teat of each cow after every milking.

As a teat spray

Using a suitable pressure sprayer, make up 6 litres of spray by mixing 500 ml of UDDER MATE to 5.5 litres of cool clean water. After milking thoroughly spray the udder area to ensure all-over cover of cow's teats.
