UDDERSAN IODOPHOR TEAT SANITISER

DESCRIPTION

UDDERSAN Iodophor Teat Sanitiser is a "dual-use" product to assist in the control of mastitis in dairy cows and as an aid in preventing teat cracking and chapping.

APPLICATION

UDDERSAN can be equally effectively used as a standard type teat dip or in the newer method of spraying the udder area using a suitable pressure spray. In either case, every cow should be treated after each milking. UDDERSAN now contains POLIDONE which will create a moisturising polymer film over the teat canal to block out mastitis causing bacteria.

BENEFITS

- UDDERSAN contains 2% available iodine which at use dilution as a teat dip results in the teat being covered by a plastic skin containing 5,000 parts per million of iodine, which rapidly kills mastitis producing bacteria.
- The POLIDONE present in UDDERSAN with its unique conditioning agents ensures UDDERSAN is non irritant to the tissues of the teat promoting quicker healing of cuts and abrasions. In many cases UDDERSAN saves the use of an ointment or cream.
- UDDERSAN with its unique POLIDONE technology surround the cows teat with a protective barrier against environmental mastitis.
- UDDERSAN with its SLOW RELEASE, LONGER ACTING formulation thus ensures extended mastitis control between milkings when compared with conventional iodine teat sanitisers.

The Product Information Sheet supersedes all previous issues for this product. Information contained herein is offered in good faith as being true and accurate to the best of our knowledge, but as the conditions of use are beyond our control, no guarantees are either stated or implied.

Where health or safety data given discloses a risk to the user or the environment, it is the responsibility of the purchaser to pass on the information to employees who may be using the product, ensuring that adequate safety procedures are used, including good industrial hygiene.

UDDERSAN

Page 2 of 2

METHOD OF USE

As a Teat Dip

Mix one part UDDERSAN Iodophor Teat Sanitiser with three parts of cooled "BOILED DAIRY HEATER WATER" (less than 50°C), and using a small non-metal cup or container, dip each teat of each cow after every milking.

As an Udder Spray

Using a suitable pressure sprayer make up 4 litres of the spray by mixing 1 litre of UDDERSAN with 3 litres of cooled "BOILED DAIRY HEATER WATER." After milking, thoroughly spray the udder area to ensure all-over cover of cows' teats.

In extreme muddy or dry conditions up to 20% of the water can be replaced by a suitable emollient, preferably Tasman Chemicals EMOLAN.

Note: Tasman Chemicals recommend the use of cooled "BOILED DAIRY HEATER WATER" when diluting teat sanitiser solutions. This will allow the teat sanitiser to operate at its greatest efficiency in the farm's purest water source.

PACKAGING

- 20lt Polyethylene containers
- 110lt Polyethylene containers
- 200lt Polyethylene containers
